

# PROJECT REPORT

## INTERNSHIP PROJECT

### DOCTOR APPOINTMENT DASHBOARD

Project : 1.Create a Doctor Appointment Dashboard with using PHP

#### ABSTRACT

This dashboard created using php is

- 1) Responsible for keeping all the records of doctor appointments that are taken by users.
- 2) This system helps the patient take an appointment online and save time.

#### OBJECTIVE

- 1) The main objective of the is to provide easier doctor appointment and gets appointment online.
- 2) It helps users to choose their available timings and book an appointment of their desired doctor.

#### INTRODUCTION

This project helps a certain medical establishment such as a clinic or a hospital clients/patients to request an appointment with a doctor online. This project can also help doctors to manage the schedules of their appointments with their patients. This doctor's appointment system will organize the schedules of each patient's appointment, which will be submitted as a request to the doctor they have selected. The patients will browse the doctor's appointment system website to find a doctor that has the specialty of their needs. After that, the doctors can view all their appointments and the appointment request of the patients for their availability.

## METHODOLOGY

- 1) I used VS CODE—html to display information and css to design website.
- 2) PHP is used to store the backend information.
- 3) I also used Laravel , composer , xampp

## CODE

### Appointmentcontroller.php

```
<?php

namespace App\Http\Controllers;

use App\Models\Appointment;
use Illuminate\Http\Request;

class AppointmentController extends Controller
{
    //
    public function save(Request $request)
    {
        $patient = new Appointment([
            'name' => $request->get('name'),
            'email' => $request->get('email'),
            'timing' => $request->get('timing'),
        ]);

        $patient->save();

        return redirect()->back();
    }
}
```

### Authcontroller.php

```
<?php

namespace App\Http\Controllers;
```

```

use Illuminate\Http\Request;
use Illuminate\Support\Facades\Validator;
use App\Models\User;
use Illuminate\Support\Facades\Auth;
use Illuminate\Support\Facades\Hash;

class AuthController extends Controller
{
    public function doclogin(Request $request)
    {
        /*dd($request->all());
        $valid = $this->rules($request->all());
        if($valid->fails())
        {
            return redirect()->back();
        }
        else
        */
        $email = $request->get('email');
        $password = $request->get('password');
        if(Auth::attempt(['email'=>$email , 'password'=>$password ,
'user_type'=>'doctor'])){
            return redirect()->intended('/doctor/dashboard');
        }
        else{
            return redirect()->back();
        }
    }

    public function rules($data)
    {
        $messages = [
            'email.required' => 'Please enter email address',
            'email.exists' => 'Email already exists',
            'email.email' => 'Please enter valid email',
            'password.required' => 'Please enter password',
            'password.min' => 'Password must be atleast six characters',

        ];

        $validator = Validator::make($data,[
            'email' => 'required|email|exists:users',
            'password' => 'required'
        ], $messages);
    }

    public function savedoc (Request $request)

```

```

{
    /*$request->validate([
        'name' => 'required|string|regex:/^[a-zA-Z]{3,16}/i',
        'email' => 'required|unique:users|regex:/(.+)\@(.+)\.(.+)/i',
        'password' => 'required|min:6',
    ]);*/

    $users = new User([
        'name' => $request->get('name'),
        'email' => $request->get('email'),
        'password' => Hash::make($request->get('password')),
        'user_type' => 'doctor',
        'spl'=>$request->get('spl'),

    ]);

    $users->save();

    return redirect()->intended('/doctor/dashboard');
}
}

```

## Appointment.php

```

<?php

namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;

class Appointment extends Model
{
    protected $fillable = ['name' , 'email' , 'timing'];
    protected $table = 'appointment';
}

```

## User.php

```

<?php

namespace App\Models;

// use Illuminate\Contracts\Auth\MustVerifyEmail;
use Illuminate\Database\Eloquent\Factories\HasFactory;

```

```

use Illuminate\Foundation\Auth\User as Authenticatable;
use Illuminate\Notifications\Notifiable;
use Laravel\Sanctum\HasApiTokens;

class User extends Authenticatable
{
    use HasApiTokens, HasFactory, Notifiable;

    /**
     * The attributes that are mass assignable.
     *
     * @var array<int, string>
     */
    protected $fillable = [
        'name',
        'email',
        'password',
        'user_type',
        'spl',
    ];

    /**
     * The attributes that should be hidden for serialization.
     *
     * @var array<int, string>
     */
    protected $hidden = [
        'password',
        'remember_token',
    ];

    /**
     * The attributes that should be cast.
     *
     * @var array<string, string>
     */
    protected $casts = [
        'email_verified_at' => 'datetime',
    ];
}

```

## Login.blade.php

# DATABASE—PHP

The screenshot shows the phpMyAdmin interface for a database named 'doc'. The left sidebar lists the database structure, including tables like 'appointment', 'failed\_jobs', 'migrations', 'password\_resets', 'personal\_access\_tokens', 'users', 'information\_schema', 'mysql', 'performance\_schema', 'phpmyadmin', and 'test'. The main panel displays the 'Structure' tab for the 'doc' database. It shows a list of tables with their respective actions (Browse, Structure, Search, Insert, Empty, Drop) and a summary row for all 6 tables. Below the table list, there is a 'Create new table' section with fields for 'Table name' and 'Number of columns' (set to 4), and a 'Create' button. The bottom of the interface shows a 'Console' tab.

Table	Action	Rows	Type	Collation	Size	Overhead
appointment	Browse Structure Search Insert Empty Drop	2	InnoDB	utf8mb4_unicode_ci	16.0 KiB	-
failed_jobs	Browse Structure Search Insert Empty Drop	0	InnoDB	utf8mb4_unicode_ci	32.0 KiB	-
migrations	Browse Structure Search Insert Empty Drop	7	InnoDB	utf8mb4_unicode_ci	16.0 KiB	-
password_resets	Browse Structure Search Insert Empty Drop	0	InnoDB	utf8mb4_unicode_ci	16.0 KiB	-
personal_access_tokens	Browse Structure Search Insert Empty Drop	0	InnoDB	utf8mb4_unicode_ci	48.0 KiB	-
users	Browse Structure Search Insert Empty Drop	7	InnoDB	utf8mb4_unicode_ci	32.0 KiB	-
<b>6 tables</b>	<b>Sum</b>	<b>16</b>	<b>InnoDB</b>	<b>utf8mb4_general_ci</b>	<b>160.0 KiB</b>	<b>0 B</b>

## USERS TABLE DATA

The screenshot shows the phpMyAdmin interface for the 'users' table. The left sidebar lists the database structure, including tables like 'appointment', 'failed\_jobs', 'migrations', 'password\_resets', 'personal\_access\_tokens', 'users', 'information\_schema', 'mysql', 'performance\_schema', 'phpmyadmin', and 'test'. The main panel displays the 'Browse' tab for the 'users' table. It shows a list of rows with their respective actions (Edit, Copy, Delete) and a summary row for all 7 rows. Below the table list, there is a 'Create new table' section with fields for 'Table name' and 'Number of columns' (set to 4), and a 'Create' button. The bottom of the interface shows a 'Console' tab.

## CONCLUSION

This Doctor Appointment System is in PHP, HTML and css. Talking about the features of this system, it contains the admin section and the user section. The main feature of this system is to provide the browser to get appointments with a doctor through the internet instead of going there and fixing an appointment. The design of this system is pretty simple so that the user won't have any difficulties while working on it.
